

# MOST INNOVATIVE ENGINEERING BUSINESS

joylab

ZÜRICH

An innovative high tech development company, joylab specialises in robotics, sensor technology and medical engineering. Unlike traditional engineering offices, joylab invents and evolves products using inspiration from new technology and trends in development, while rapid in-house prototyping allows for a quick implementation of solutions. This approach is perfect for open-minded clients who require innovative problem solving to shake up existing structures and modernise their processes and products. The engineering experts develop a client's idea from start to finish, improving existing structures with a tailor-made project that meets their specific needs.

The judges were impressed by joylab's inspiring and inventive approach, which services forward-thinking companies in need of state-of-the-art engineering support. The small team offers a flexible approach along with a responsive and rapid turnaround, which saves valuable time and costs. joylab also offers a finance model which incorporates shared royalties for their clients, enabling them to build trust-based collaborations where both parties share in the success and future of every project. This mutually beneficial partnership allows joylab to design the engineering solutions that revolutionise the technological aspects of their client's work.
